

Water resources

- The project will improve water quality in streams and wetlands by treating stormwater runoff for pollutants.
- To protect water resources, a new stormwater treatment system will be installed to treat, detain (where required), and release stormwater runoff.
- Stormwater will be treated to comply with the WSDOT Highway Runoff Manual and state water quality standards.
- There will be negligible effects to groundwater.

Example of a constructed stormwater wetland facility.

Proposed stormwater facilities

- Stream
- Proposed Stormwater Facility
- Creek Basin
- Pavement
